Certificate

This is certified that the student **Ms. Apurva Shailesh Patil & Ms. Vaishanavi Haribhau Pelmahal**, Seat No **7087 & 7052** has successfully completed their project on topic “**Online Auction Management System**” as fulfilment of B.Sc. (Computer Science) for the academic year 2024 -2025.

Asst.Prof: P.S. Malani

(Project Guide)

Dr.A.H.Bendale

External Examiner

ACKNOWLEDGEMENT

We own our sincere gratitude to all those people who have given us their constant support and encouragement without which our project report would not have reached this stage.

We would like to express our thanks to **Asst.Prof. Pawan S.Malani Sir** For his advice and encouragement. She has been pillar of strength right through the project till the preparation of this report and helped by boosting moral, so we could surmount the difficulties that came across during completion of this project.

We would like to express our gratitude to **Dr. S. V. Patil**, Principal, K. K. Wagh Arts, commerce, science and Computer Science College. And **Dr.A.H.Bendale** Head of Computer department for the support and the infrastructure they have provide, so that we could successfully complete the project on time.

Last but not the list we would like to express our sincere thanks to all staff members and our friends for their help and cooperation in all phases of the project.

PROBLEM DEFINATION

- Traditional auctions require physical presence, limiting accessibility and reducing participation.

1. Limited reach and accessibility

- Physical auction requires in person attendance, restricting participation to local bidders.

2. Manual bid tracking & errors

- Offline auction requires manual bid recording which may lead to error or dispute
- The system automates bid tracking ensuring accuracy and transparency.

3. Lack of security & fraud prevention

- Fake bids, unauthorized access and data breaches and concern in traditional auction
- The system enforces user authentication, bid validation and secure transaction.

4. Time & Cost Inefficiency

- organizing an offline auction involves venue booking, logistics and administrative work.
- online auction reduce costs and enable auction to run 24/7.

5. Delayed Action result & Notification

- In manual processes bidders are informed late about auction result.
- The system Sends instant notifications to winners and participants.

EXISTING SYSTEM

- The current auction system allows users to participate in online bidding for products. It includes module for user registration, product management bidding and system setting.

1. Users Management

- user can register and log in with unique username and emails.
- Password are securely stored. □ only logged-in-user can place bids.

2. Product management

- Admins or sellers can list new product for bidding.
- Each product has a name, description and starting bid amount.
- Products are categorized to enhance searchability

3. Bidding system

- user places bids on listed products.
- The system ensures that the bid amount is higher than the Starting bid.
- only the highest bidder wins after the auction ends.

4. System setting

- user authentication to prevent unauthorized access.
- Protection against duplicate user registrations.

PROPOSED SYSTEM

- The system will be php-MySQL-based web application with a responsive UI. The key feature include:

1. User Management:

- Secure user registration & login(handle in Signup. Php).
- Role based access for buyers & Sellers.

2.Auction Listings:

- Sellers can list items with Images. Starting descriptions and Starting bid prices.
- Buyers can view and search for auctioned them.

3.Bidding System:

- users can place bids on listed items.
- Auto update of the current highest bid.

4.Real-Time Auction Tracking

- Live updates of bid history and auction status.

5.Admin dashboard

- Admin can manage users, monitors auction and handle dispute.

REQUIREMENT ANALYSIS

Hardware Requirements:

- A computer system with processor.
- Minimum 8GB RAM.
- 500GB Storage
- Windows operation system • Generation i5,intel core.
- Mouse.
- Keyboard.
- Printer.

Software Requirements:

- Web Browsers(Microsoft Internet/Mozilla Firefox).
- Xampp server.
- Php Myadmin
- Cascading Style Sheets.
- Front end designing: HTML,PHP,CSS,bootstrap.
- Backend designing :php,jquery,javascript,ajax.
- Database :mysqli.

SCOPE OF THE SYSTEM

➤ An Online Auction system is a web-based platform that enables buyers and seller to participate in real-time bidding activities. The system provides a structured environment for auctioning product or services, ensuring transparency, automation and accessibility.

- **Key feature and Scope**

- 1.User Roles:**

- Admin Panel: Manages auction items, users and transaction.
 - Seller Panel: Allows Sellers to list item for auction. □
 - Buyers Panel: Enables registered users to place bids.

- 2.Auction Management**

- Seller can list products with a starting price, bid increment and time duration.
 - The system automatically tracks highest bids and declare the winner at auction closure.

3.User Authentication & security

- Secure login and registration for buyers and sellers. □
Role-based access to ensure auction integrity

4.Real Time Bidding System.

- Display live updates on ongoing bids
- Sends notifications to bidders about new bids or auction result.

5.Repost & Analytics

- Admin dashboard for auction statistic and user activity tracking.

FEASIBILITY STUDY

1. Technical Feasibility: The project uses PHP, MySQL, JS, jquery, HTML, CSS and Bootstrap, which are well supported technologies. The database structure (users, Products, Bids). is well-defined. The system can be hosted on a cloud server or a local web server (XAMPP, WAMP). Security measure such as password encryption. and user authentication are feasible.

2. operational feasibility:

The system is user-friendly allowing users to easily register , place bids and manage product. Admins can manage auctions efficiently using the dashboard. Notifications for bid updates and auctions result improve user engagement. Minimal training is required for user, making adoption easy .

3. legal feasibility: The platform must comply with IT laws and data privacy regulations. Secure transactions and buyerseller agreements must be defined.

4. Sheduling feasibility: a) Project Timeline: 1 month

b) Requirement Gathering: 1 weeks

c) Database Design & setup: 2 weeks

d) Frontend & Backend Development: 8 weeks.

e) Testing & Debugging: 2 weeks

DATA DICTIONARY

1.Bids Table

Column table	Data type	Constraint	Description
id	INT	PRIMARY KEY	Unique identifier for each bid .
user_id	INT	FOREIGN KEY(user.id)	ID of the user placing the bid.
product_id	INT	FOREIGN KEY(product.id)	ID of the product being bid on
bid_amount	FLOAT	NOT NULL	Amount of the bid
STATUS	TINYINT	DEFAULT 0	Status of the bid(0:pending,1: Accepted,2:reject)

2.Product Table

Column table	Data type	Constraint	Description
id	INT	PRIMARY KEY	Unique identifier for each product .
category_id	INT	FOREIGN KEY	Category of the product .
name	VARCHAR (200)	NOT NULL	Name of the product
description	Text	NULLABLE	product details
Start_bid	FLOAT	NOT NULL	Starting bid amount

3.user Table

Column table	Data type	Constraint	Description
id	INT	PRIMARY KEY	Unique identifier for each product .
Name	VARCHAR (200)	NOT NULL	Full Name of the user .
username	VARCHAR (200)	UNIQUE NOT NULL	Login username
password	VARCHAR (200)	NOT NULL	Encrypted password
email	VARCHAR (200)	UNIQUE NOT NULL	Email address

4.system setting Table

Column table	Data type	Constraint	Description
id	INT	PRIMARY KEY	Unique identifier for setting .
Name	VARCHAR (200)	NOT NULL	Setting name.
email	VARCHAR (200)	NULLABLE	Admin contact
contact	VARCHAR (200)	NULLABLE	Admin phone no.
cover_img	TEXT	NULLABLE	Cover Image for site

Report Testing

1.User registration

Test case	Description	input	Description	Status
TC001	Register a new user	Valid name,email, username, password	User registered successfully	Pass/Fail
TC002	Registered with an existing email.	Duplicate email	Error:email already exists	Pass/Fail
TC003	Register with a weak password	Password less than 6 character.	Error:password Too short	Pass/Fail

2.user login

Test case	Description	input	Description	Status
TC004	Valid login	Correct username and password	Redirect to dashboard	Pass/Fail
TC005	Invalid login	Incorrect password	Error:invalid credential	Pass/Fail

3.Bidding

Test case	Description	input	Description	Status
TC006	Place a valid bid	Valid product id & bid amount.	Bid placed successfully.	Pass/Fail
TC007	Place bid lower than start bid.	Lower bid amount	Error:bid too low.	Pass/Fail
TC008	Place bid as a non logged - in -user	No user session	Error:please login first	Pass/Fail

4.product management

Test case	Description	input	Description	Status
TC009	Add a new product	Valid details	Product added successfully	Pass/Fail
TC0010	Add product with missing name	Empty name field	Error:product name is required .	Pass/Fail

Conclusion

The online auction system has made customers more efficient and efficient in their behavior and has driven businesses to new heights, forcing many to make the adjustments and changes necessary to reach a new market of knowledgeable consumers. The rapid growth of e-auctions has led to an e-transformation in global retail infrastructure. Thanks to a growing internet and higher incomes and a more savvy population, despite many obstacles. Secure online payments, good for electronic stores, return policies and exciting discounts help you understand the benefits of the auction system. A better understanding of the behavior of the consumer online auction system can help companies gain more online customers and increase their e-business revenue. At the same time, consumers are more inclined to make purchases online, as they realize the benefits of e-auction. With the popularity of the Internet, the number of Internet users continues to grow and more and more Internet users are becoming online users, even regular online buyers.

Future Enhancement

- **Advanced Analytics** – Provide real-time reports and bidding trends for users.
- **Mobile App Integration** – Enhance accessibility with a dedicated mobile application.
- **Social Media Sharing** – Expand reach by allowing users to share auctions online.
- **AI-Powered Auto Bidding** – Automate bidding with AI to optimize user participation.
